

Biometric login is an option for **EXAM-RIS** that uses Digital Persona's U.are.U[®] fingerprint reader to provide a layer of protection that is unparalleled in the Radiology Information System industry, and that far exceeds the password requirements needed for HIPAA compliance.

Instead of logging in with a password that can be shared or stolen, enjoy complete security by signing in with your unique fingerprint!

In addition, using the fingerprint reader greatly simplifies the login procedure for radiologists who want to sign off on their reports.

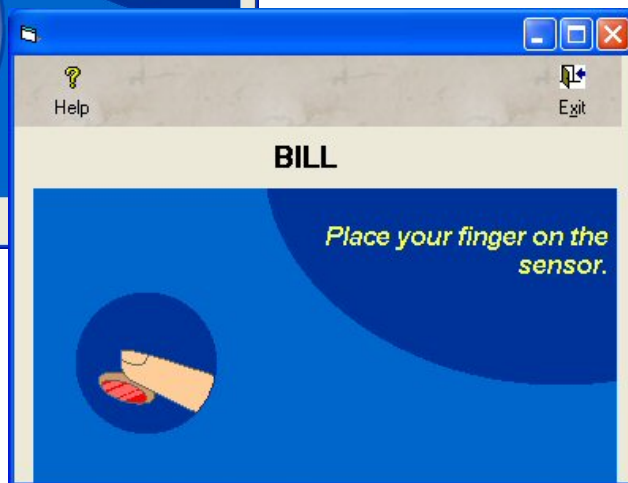

Registering your fingerprint is easy. You simply press your finger on the reader four times. Each time, the reader verifies that it has captured a good image.

That's it! Your password is now secure.

Once your fingerprint has been registered, you log into **EXAM-RIS** simply by entering your User Name and touching the reader.

U.are.U Fingerprint Reader

Features

- Compatible with **EXAM-RIS**
- Suitable for both desktop and notebook computers
- Small form factor
- Encrypted image data
- Rotation invariant— scanner not dependent on orientation of fingerprint
- Latent print rejection
- Counterfeit image rejection
- Rugged
- Connects to computer using a USB port — compatible with specifications 1.0, 1.1, and 2.0
