Powered by Swearingen RISynergy<sup>®</sup>

## Mammography

The Mammography module is a powerful option for **EXAM-RIS**. To insure that this module would meet your mammography information needs both now and in the future, the software was developed after consulting both the ACR with whom the **EXAM-RIS** and Swearingen Software are licensed, and numerous hospitals and clinics.

The Mammography module efficiently tracks patient information through all mammography steps including patient registration, examination, diagnosis, biopsy, and treatment. Because this module uses ACR Lexicons, it helps you comply with ACR guidelines and regulations.

During the registration process, information is gathered for input into the Mammography Master.

The **PDF Documents** feature displays the information in the Mammography Master Maintenance screen. This form can be useful during the patient registration, allowing you to print the information and letting the patient provide updates.

Information about the mammogram visit is entered for the patient using ACR Lexicon codes.

The radiologist's findings, biopsy result, and treatment plan can be recorded for each mass that is found.

For more information, contact CoActiv Medical at 1-877-COACTIV (262-2848) or visit our website: [WWW.COACTIV.COM](http://WWW.COACTIV.COM)

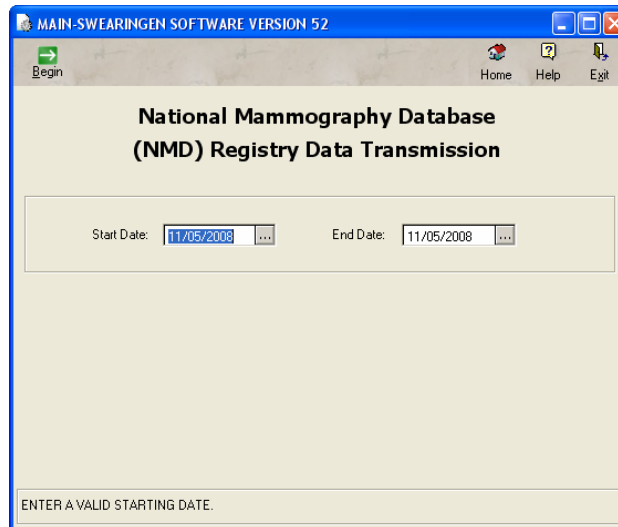

# Mammography

## Letters

The Mammography module offers a full suite of customizable letters that include: Patient normal letters, Patient abnormal letters, Physician letters, Follow-up letters, Patient reminder letters, Patient second reminder letters and Unresolved letters. There are also custom letters available, allowing any information desired in the letter. Because these letters use the powerful mail-merge feature of **EXAM-RIS**, the process of creating these letters is completely automated and helps to insure that no patient “falls through the cracks.”

## National Mammography Database

This module allows users to send statistics to the National Mammography Database in the required format. The messages include the required field and most of the optional fields specified by the organization.

## Reports

The Mammography module will save you and your staff hours of time with its advanced statistical and reporting capabilities. Within minutes, you can easily create complex reports, such as:

- Missing Letter Report
- Mammo Exams by Radiologist
- Mammo Exams by Technologist
- Mammo Exams by Patient
- Incomplete Mammo Exams
- Biopsy Results Summary

In addition, the Mammography module also includes a flexible ad-hoc report generator that allows you to create additional reports as needed.
