

CoActiv EXAM-RIS[®] Software

Patient System

Powered by Swearingen RISynergy[®]

The Patient System module is an integral part of **EXAM-RIS**. This module provides quick access to both demographic and visit information about each patient in the database.

Demographic information is stored in the Patient Master. With a patient's record displayed, you can use options on the toolbar to perform such patient-related functions as scheduling an exam for the patient, creating or viewing information about a single visit, viewing the patient's visit history, and displaying the transcribed results of an exam.

PATIENT MASTER
*** COMMENTS AVAILABLE ***

Options on this toolbar provide quick access to screens where you can perform other patient-related functions.

Several fields on this screen may be customized to meet the needs of your organization.

The **Visit Details** screen provides complete information about a patient's visit.

The physicians identified here may receive the radiologist's report.

Up to four physicians can be identified on this screen.

VISIT DETAILS

PATIENT ALLERGY DETAILS

Patient #: 00000000998998 LEIGH K TATUM

Allergy Code: 001 PEANUT ALLERGY
 Type Code: FA FOOD ALLERGY
 Severity Code: SV SEVERE
 Reaction Code: AN ANAPHYLAXIS

Comments:

Allergy Code	Description	Type Code	Severity Code	Reaction Code
001	PEANUT ALLERGY	FA	SV	AN
030	PENICILLIN	DA	SV	AN

Enter allergy code. Allergy Count: 2

Patient Allergies

The Patient Allergy feature allows users to define a patient's specific allergy type, reaction, and severity. This enhancement minimizes patient care errors and provides quick access to the patient's specific needs.

Worklist Tree Feature

EXAM-RIS displays patient-related data in a variety of ways. The Worklist Tree is a graphical view of work for a specified date that shows the status of each visit.

By displaying a date or date range that occurred in the past, you can use the Worklist Tree to ensure that all visits have been finalized in **EXAM-RIS**.
