

Once a radiologist has dictated the findings on a visit, the Transcription module allows a transcriptionist to transcribe the result. The radiologist then reviews the typed results and approves the completed report.

Options: Color Full Line, Show Questionable, Show Typed

Status: To Be Typed (269), In Process (15), Typed (14), Questionable (0), Excess Wait (12), Addendum (5), (all status codes)

Actions: Add/Edit Report, Add Normals Report, Visit Comments, Edit Visit, Fax/Email, Print, Clear Select, Patient QuickList, Home, Exit

This worklist allows transcriptionists to access and transcribe all of the reports.

Special features include:

- Color-coded line items that allow transcriptionists to quickly determine the overall priority.
- The ability to view only a single status, or view all exams and status codes.
- Allows users to update patient information and visit information if they are given permissions to do so. Users may also fax, email, or print transcribed reports and modify patient exam and appointment information.

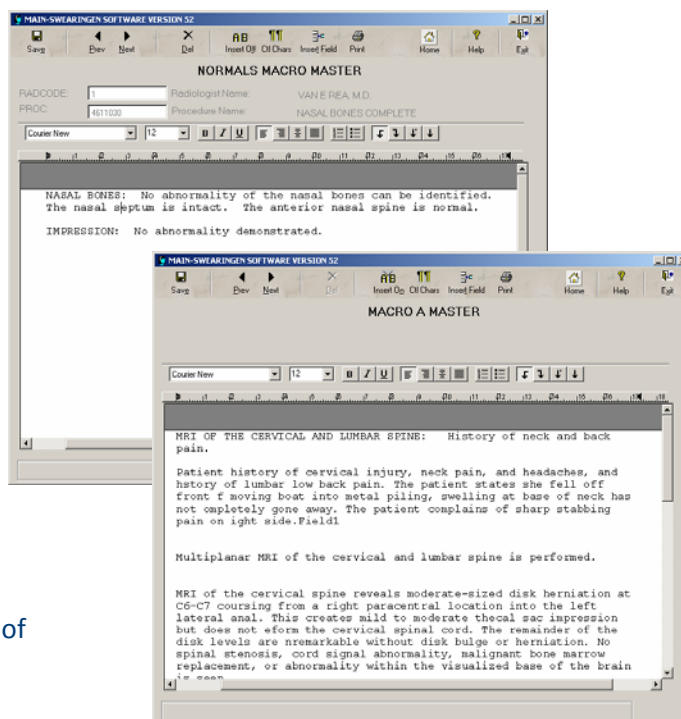

A key feature of Transcription is the powerful radiology/medical spell checker.

The Transcription of EXAM-RIS features three types of boilerplate text: Normals, Macros, and Extended Macros.

Two types of Normals are available to describe normal findings:

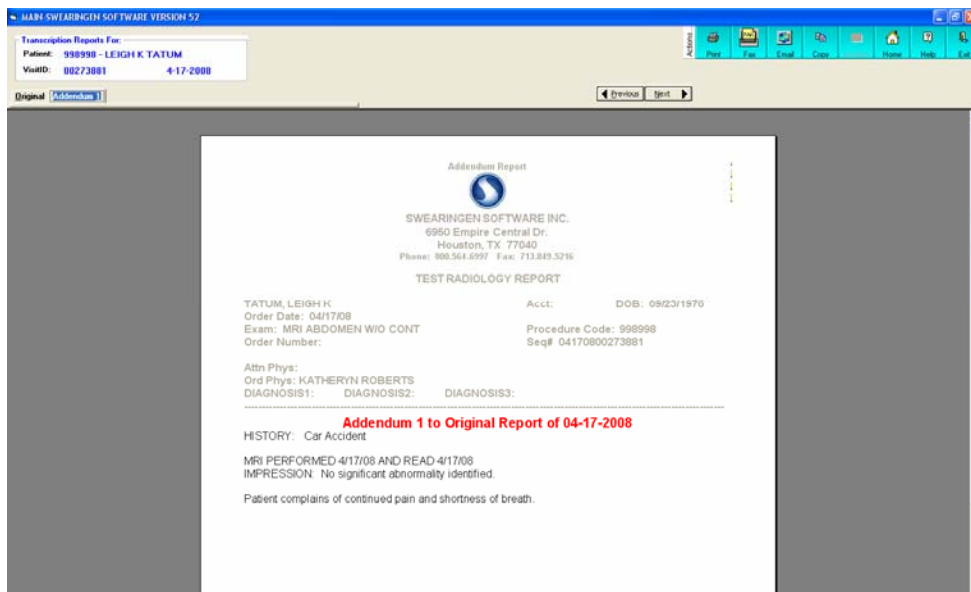

- Generic Normals can be used for a group of radiologists.
- Specific Normals can be used for radiologists who want their own text used.

Both Macros and Extended Macros are typically used when Normals are not appropriate. These two types of macro differ only in the way they are accessed.

Transcription

Report Addendums

Addendums allow users to append completed Transcription reports.

They are important for legal reasons. Once the physician has signed a transcription report, it is to remain as is. Therefore, the addendums feature allows corrections or additions to the report without changing the original document.

EXAM-RIS allows you to create up to 9 addendums for each transcription report.

Reports

The many customizable reports in the Transcription System allow you to analyze and report radiologist and transcriptionist data in a variety of ways to help meet the needs of your organization.
